## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,5,6,9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Long (5,937,684). Long discloses a tool body (3), a tightening nut (10,11), three rollers (4,5,6) and means (2) for rotating the rollers about a workpiece to provide grooves on an outer surface of the workpiece. The tool body (3) has a relief hole (19). The rollers rotate on bushings (8,9) and are seated in cavities in the tool body. The rollers have raised threads on their outer surfaces. The tool body has a tapered portion (1).

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3,4,7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Long (5,937,684) in view of Helfman (4,942,752). Long does not disclose four rollers, a handle to rotate the rollers and hardened rollers. Helfman teaches four rollers (13,14,16,17) and a handle (26,27) to rotate the rollers. Helfman teaches in column 4,

Art Unit: 3725

lines 14-16 that the rollers are hardened. It would have been obvious to one skilled in the art at the time of invention to provide Long with four rollers in order to ensure an even running of the rollers about the workpiece, it is conventional to harden rollers to provide a rolling tool that wears well. It would have been obvious to the skilled artisan at the time of invention to provide a well known handle as taught by Helfman to manually rotate the rollers and attach it to the means for rotation (socket) of Long.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
